

INTERIOR LIFT FOR PASSENGER SEATS

Product Group 9025

Key Benefits

Interior Lifts are specially designed to transport heavy interior items, such as passenger seats, into or out of the aircraft with ease and efficiency. These lifts provide a convenient and safe solution for moving bulky components, streamlining the maintenance and refurbishment processes. An optional feature of the lift is the ramp lift, which can lower all the way down to the ground, making it easier to load and unload items without additional equipment or manual handling. This added functionality enhances the lift's versatility, ensuring smooth and efficient operations in various aircraft configurations.

Features

- Flexible railing system for fall protection and perfect fit to aircraft
- Rubber padding to protect aircraft skin
- Minimum footprint
- For aircraft on wheels and jacked
