

NARROW BODY COMPACT NOSE ACCESS STAND

Product Group 9074

Key Benefits

This system is specifically designed for both PAX door and cockpit window access, accommodating both the left and right sides of the aircraft. The platform is sized and configurable for the removal of seats and galleys from the aircraft, offering versatility in maintenance tasks. Adjustable railings and floors enclose the aircraft's contour, ensuring optimal access and providing fall protection during operations. It fits multiple narrow-body aircraft types, both on wheels and in jacked maintenance configurations, making it ideal for various maintenance needs. The system is ground mobile, allowing for flexible operations within the hangar bay, and features a minimum footprint with maximized floor area for efficient use of space. Built with a combination of aluminum and steel materials, it offers both robustness and stability, ensuring durability during frequent use.

Features

- Manual height adjustment
- Optional: electro-hydraulic height adjustment
- Adjustable floor elements
- Slidable railing and pivotable gates
- Rubber padding to protect aircraft skin
- Utility board for electrics (230V socket) and compressed air connection (1/2" BSP)
- Designed according to the latest safety standards
